

SYNAPSE-S2

durable local memory, governed action, verified continuity

DAILY TRUST LOOP

Choose context -> Start Work -> Health + Doctor -> Enter Cortex -> Capture / Recall -> Wrap + protect

MEMORY + RETRIEVAL

- Durable text, events, goals, typed graph, and namespaces
- Retrieval v2 with Local / Connected / All scopes
- Retrieval associations route relevance, never authority

CAPTURE + MEDIA

- Exactly-once conversation and App Connect capture
- Private image memory, Vision cues, and media similarity
- Source-backed provenance and surgical correction

GOVERNANCE

- Cortex Governor and Goal Ledger preserve intent and evidence
- Memora proposal -> review -> promote / reject / revoke
- Suggestions and cues never create tasks or approvals

PROOF + CONTINUITY

- Honest Impact metrics and bounded LongMem evaluation
- Signed paired recovery with isolated restore proof
- Target-bound checkpoints with signed ACK; no promotion

SAFE RELEASE POSTURE

Usable now: verified checkout, authoritative core, dashboard, CLI/MCP, capture, recall, recovery, and offline checkpoint stage/ACK.

Not yet claimed: signed/notarized installer, unattended cutover, migrations, executable rollback, or multi-host canary.
